Welcome to the CONTENT survey. A study on the impact of the pandemic on mental health and social inequalities.

The COVID-19 pandemic is a global health emergency, and that is why it is of the utmost importance to face the scientific and research challenges derived from this health emergency to provide solutions in the present and in the future.

We want to assess the symptoms of Covid-19 disease and factors associated with pathology, transmission, susceptibility to Covid-19, and prognosis. Likewise, we consider that it is necessary to study how the pandemic affects people, specifically the effect that this confinement causes on physical and mental health.

This study is coordinated by the Barcelona Institute for Global Health (ISGlobal) in collaboration with other research centers in Spain and includes more than 20,000 people from the Spanish territory.

Note that at the end of the survey you can add any comments or clarifications you want.

Information to answer the questionnaire:

To scroll through the survey, press the button with the "V" that you can see in the questionnaire below.

Please do not use the back / forward buttons of the browser. The approximate duration of the survey is 30-40 minutes.

We recommend that you begin the questionnaire when you know you have enough time. If you need to stop, you can save the survey by pressing the "save and come back later" button and continue it later.

Your collaboration is extremely important to us and we appreciate your participation.
